

## **Dominion Transmission Inc. Approves Liberty HD Rockshield**

The DTI has recently approved the Liberty HD Rockshield material for use on future construction projects. The Pipeline Integrity Corrosion group, chaired by Mark Linville, has also approved the Liberty HD Rockshield for use by DTI.

The Liberty HD Rockshield has been used in many projects over the years and is an excellent means to protect the pipe coating during the backfill operation. Liberty HD is available in a variety of stock sizes, in both rolls or pads and is also available in custom sizes.

We are excited about the approval and wanted to let all the DTI contractors know that the Liberty HD Rockshield provides competes head to head with the other rockshield products on the market and provides you with a competitive alternative.
